

# SSH login credentials

nhorvath		Jun 11
After using the menu on the Mark 1 to enable SSH what is the username and password used to login by default?		Jun 11
<div><div><div>🔗 How to get into mycroft?</div><div>🔗 Interacting with the Mark I via SSH</div><div>🔗 How to get into mycroft?</div></div></div>		<div>1 / 3</div> <div>Jun 12</div>
<div><div>Don_Newell</div><div>username is pi</div><div>password mycroft</div><div>you should change this when you get it for security reasons (you probably know this but others that look this up may not)</div></div>		Jun 12
nealmcb		Jul 1
To ssh to your mark 1, assuming your system supports mdns/bonjour, say:		Jul 1
ssh pi@mark1.local		<div><div></div><div></div></div>
The first time you do so you'll see the key fingerprint for your mark 1, and it will ask you to confirm it:		
Are you sure you want to continue connecting (yes/no)?		
Say yes, and it will remember that for future reference, and check when re-connecting.		
As noted above, the password is initially just "mycroft". You should immediately change it by running this and following the prompts to choose a strong new key. 'Cause you don't want others hacking into your AI agent.....		
passwd
